IRONSCALES
SAFER TOGETHER

IRONSCALES Starter™

FREE Email Security & Training

What's included:

- ✓ Phishing Simulation and Employee Training
- ✓ Email Client Phishing Report Buttons
- ✓ Reporting Dashboards and Analytics
- ✓ Automated Mailbox Management
- ✓ Mobile App for Security Admins
- ✓ SSO Integration

We believe cybersecurity is a right for everyone, so we created IRONSCALES™ Starter™. This plan is FREE of charge and includes email security features every organization should have including Phishing Simulation & Training, a Threat Management Dashboard, and a host of other valuable cybersecurity features.

Office 365

O365 Integration in 2-Clicks

IRONSCALES™ Starter™ integrates with Microsoft Office with just 2-clicks. Our email security service is designed to come to you and scale with your business. Using our native API integration, you can deploy IRONSCALES in minutes with no configuration changes, risks, or interruptions.
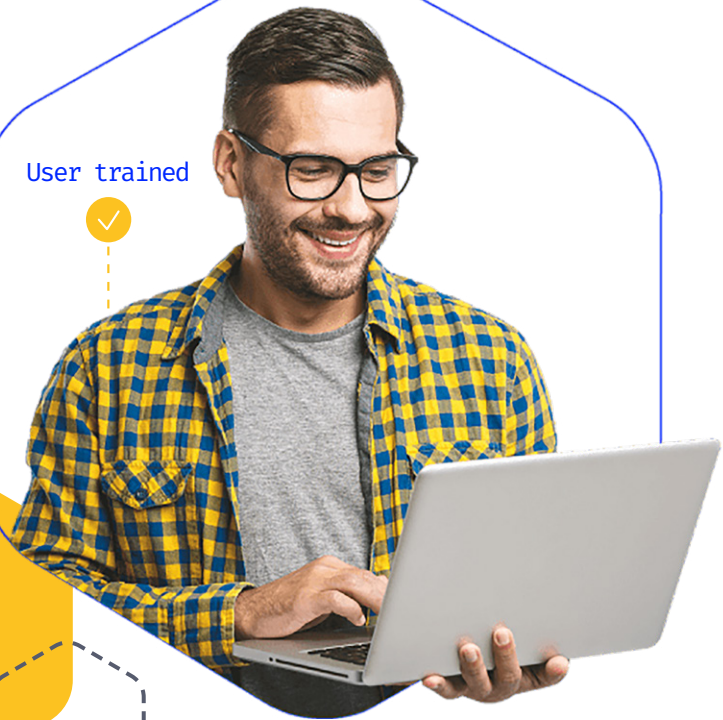

Plan Features

Phishing Simulation Testing

Conventional phishing simulations rely on fictional or outdated scenarios. The IRONSCALES™ platform simulations use real-time data from a global community of security analysts.

Your team will prepare for relevant attacks such as credential theft, invoice fraud, vendor account compromise, and ransomware.

Note: Starter™ is limited to 12 training campaigns per year, with basic training content.
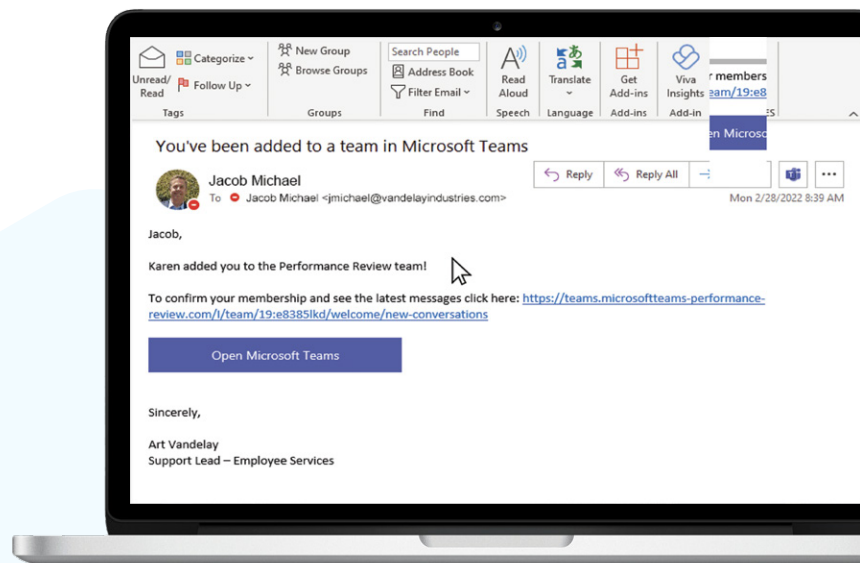

User trained ✓

Phishing Report Button

Equip your team with a Report Phishing Button directly in their Outlook email client.

The integrated phishing report button functions as a constant reminder of the threat of phishing and allows employees to report suspicious emails to the security team for review with one simple click.

If the security team determines that the email is risky or malicious, they can instantly remove the same email from all company inboxes where it might be present.

You've been added to a team in Microsoft Teams

IRONSCALES
SAFER TOGETHER

Reporting Dashboards and Analytics

Our dashboards make it easy to quickly investigate and remediate emails that have been reported by employees.

View detailed executive reports that you can share with your leadership team to show the effectiveness and value of your IRONSCALES Starter solution.

Summary of email threats detected

- Malware
- Fake Login Pages
- Sender Impersonation
- Account Takeover
- CEO Fraud
- VIP Impersonation

One-Click Incident Remediation

The email investigation console makes organizing your reported phishing emails easy:

- Gather valuable insights on the sender reputation, attached documents, embedded links and more…

- Remediate malicious emails by removing them from all recipients' inboxes with one simple click

- Review and take action on messages that users flag with the integrated Phishing Report Button
