

IRONSCALES + MICROSOFT

Smarter Microsoft 365 Email Security.
No MX Changes Required.

Microsoft Defender and EOP are great at catching spam, malware, and known phishing. But modern attacks are different.

Threats like Business Email Compromise (BEC), Account Takeover (ATO), and social engineering rely on trust, tone, and timing, not malware or links. Just convincing messages designed to slip through.

IRONSCALES adds a layer of defense inside M365 and Teams, scanning inboxes in real time using Adaptive AI, NLP/NLU, and your org's communication patterns. Our Agentic AI SOC assistant, Themis, will cluster, quarantine, or escalate — before users ever engage.

“ Before Ironscales, lots of phishing emails were reaching the user's Inbox. This was a big security risk for our organization especially being a nonprofit. We had implemented standard security controls through Microsoft 365 which helped but after implementing Ironscales almost all phishing emails were filtered and caught before they reached a user's Inbox. For a lean IT support staff, this helped us manage and resolve potential threats much quicker and easier. ”

Why MICROSOFT + IRONSCALES

Powerful Protection

IRONSCALES Adaptive AI continuously evolves through a feedback loop of machine learning and human insights. We use NLP and NLU to build a behavioral social graph for every user, while computer vision flags visual threats like fake login pages or spoofed logos. Detection accuracy improves constantly as SOC teams and our analyst community reinforce the models in real time.

Enterprise Efficiency

Connect via Graph API in just a few clicks, no MX changes. Manage escalations with one-click remediation. Themis, our Agentic AI virtual SOC automates over 99% of detection and response actions, giving you back hours every week.

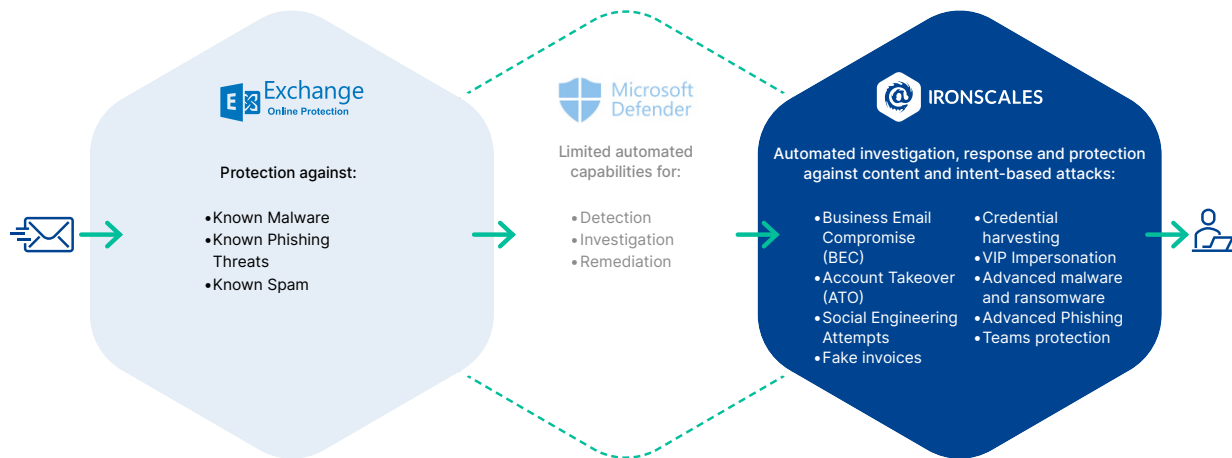

Proactive Awareness

Incorporate phishing simulation testing, security awareness training, dynamic email banners, and further reduce risks and increase your employee's grasp of the phishing threats that they are vulnerable to.

Build A Defense-in-depth Email Security Strategy

Microsoft filters stop what's already known. IRONSCALES handles what's new, evolving, or hiding in plain sight.

Once an email reaches the inbox, IRONSCALES scans for anomalies in tone, sender behavior, language patterns, links, and attachments — all in context. Themis, our agentic virtual SOC, takes action immediately: clustering threats, quarantining payloads, and alerting admins only when needed. You stay in control — tuning thresholds and workflows to match your team's preferences. IRONSCALES handles the rest.

Quickly see what threats are lurking in your M365 mailbox with our 90-day threat scan back.

Our free 90-day scan back automatically reviews your M365 email environment and quickly identifies malware, BEC, phishing, ATO, and other phishing threats that were missed by your SEG.

ABOUT IRONSCALES

IRONSCALES is the leader in AI-powered email security protecting over 15,000 global organizations from advanced phishing threats. As the pioneer of adaptive AI, we detect and remediate attacks like business email compromise (BEC), account takeovers (ATO), and zero-days that other solutions miss. By combining the power of AI and continuous human insights, we safeguard inboxes, unburden IT teams, and turn employees into a vital part of cyber defense across enterprises and managed service providers (MSPs). IRONSCALES is headquartered in Atlanta, Georgia. Visit <http://www.ironscALES.com> or [@IRONSCALES](#) to learn more.
