IRONSCALES

# Phishing Simulation Testing

Deliver the Right Training at the Right Time for the Right Person

Employees are the last line of defense against email-based cyber attacks. Maintaining a strong level of company-wide security awareness about how to spot phishing emails is an important part of any company security program. IRONSCALES can help.

Phishing Simulation Testing for Every Employee

Your training program should meet employees where they are. Training can be easily customized by role, function, access level, geography, device type and more. The exercises are fun, engaging and based on real-world threats.

Departments Campaigns 2020 Q2: 38 Participants

The Challenge

Finding the balance between maintaining a high level of email security awareness and impacting employee morale and productivity is an ongoing challenge. Understanding who is being targeted and which employees are doing better than others is critical to success, as a security program is only as strong as its weakest link. Our built-in training capabilities, which are included with our service, are designed to provide highly personalized, reality-based training content to employees only when they need it is the right solution.

The Solution

The IRONSCALES platform provides security teams with the ability to design, deploy and track phishing simulation testing campaigns in a simple, fast and effective manner:

- **Launch Campaigns** with auto-generated content sourced from recent real-world attacks

- **Create Campaigns** in just one click or choose from a list of recommendations

- **Purchase Content Packs** to take your phishing simulation testing campaigns to the next level

Phishing Simulations Built on Real-World Activities

Traditional phishing simulations rely on fictional or outdated scenarios. Our simulations leverage reality-based scenarios that have been identified and sent to us by the thousands of security teams that comprise our Community. Choosing from our pre-built recommended campaigns or customize your own using an actual phishing email as a template, you can test your team against the latest phishing attacks.
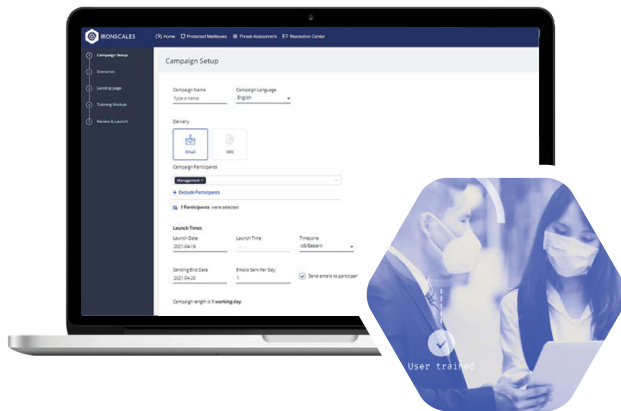

One-click phishing simulation testing campaigns and auto-generated content

Security teams can launch phishing simulation testing campaigns in just one click. Our recommended campaigns leverage auto-generated content based on market and seasonal trends, and the awareness level and phishing susceptibility scores of those included in the simulated attack scenario being deployed.

Why choose IRONSCALES?

1. We are fast to deploy, simple to manage and highly effective in stopping all types of email attacks

2. We deliver email security in the mailbox and defend against modern email threats

3. We integrate both email security and awareness training into a single offering

94%
of all cyber attacks use email
as their attack vector.

**Click rates on phishing
emails vary from
6% to 16%**
depending on the industry.

> IRONSCALES helps us train our employees to recognize and easily report phishing emails, resulting in significant savings on IT human resources.
