IRONSCALES

The IRONSCALES ™ Difference

Healthcare's Helping Hand in Fighting Phishing Attacks

Effective hospital and clinical inbox protection from advanced phishing attacks, including those that bypass existing security controls, with AI-driven email security.

Phishing attacks are consistently sited as the leading attack vector for healthcare organizations. Whether it's a lack of funding, outdated technologies shielding protected healthcare information (PHI), or an overworked staff member accidentally clicking a link they otherwise wouldn't - these businesses are simply more susceptible to today's phishing threats. The industry's reliance on email for communication and patient care coordination makes it a prime target for sophisticated attacks.

For hospitals and clinics, maintaining compliance while mitigating email-based threats demands a scalable, proactive email security solution. The IRONSCALES platform stops the most elusive BEC, ATO, and VIP attacks that breach perimeter defenses including native cloud-hosted email security controls. By combining AI and human insights, we protect both your patient's and employee's inboxes better than legacy technologies.

Gain Triple Threat Protection With IRONSCALES

- Advanced Threat Intel (+ Computer Vision)
- Anomaly Detection (Behavioral + Intent Signals)
- Real-Time Threat Hunting (SOC Community Signals, 25K+ Analysts)

Protect Better

Address advanced email attacks that evade your defenses and reach inboxes

Leverage a powerful combination of AI/ML, natural language processing, human intelligence, and community insights to automatically discover, alert, and remediate advanced phishing threats like malware, business email compromise (BEC), ransomware, and credential theft, that get past your existing security layers. Unlike traditional SEGs, our platform uses machine learning to recognize subtle attack patterns and adapt to new threats in real time.

The IRONSCALES platform harnesses the power of both self-learning and adaptive AI/ML to continuously improve its performance to enable you to:

- Leverage adaptive, self-learning AI language models to automatically remediate advanced and emerging email threats
- Analyze behavior to establish baselines, create social graphs, and identify anomalies and threats
- Discover and analyze identity and inbox data for informed decision-making
- Continuous analysis of email content, payloads, and intent

Unleash the Power of AI and Human Insights with IRONSCALES™

Artificial Intelligence

- Advanced Threat Protection
- Continuous Behavior Analysis
- Automated Inbound Email Scanning
- Automated Incident Response
- Fake Login Page Protection
- Account Takeover Protection
- Microsoft® Teams Security

Human Insights

- Report Phishing Buttons
- Crowdsourced Threat Intel
- Inline Email Alert Banners
- Phishing Simulation Testing
- Security Awareness Training (SAT)
- Reporting Console
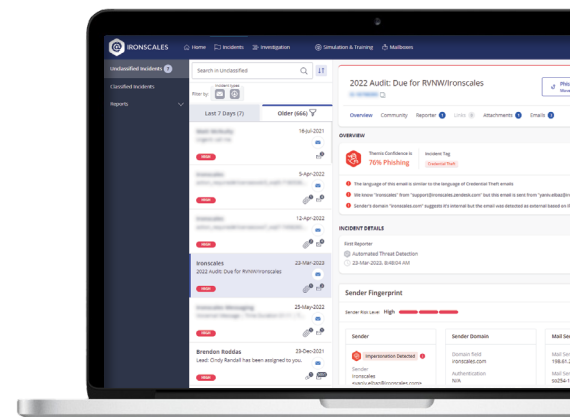

Empowering Healthcare Workers
Mobilize your employees as a critical line of defense

Effortlessly incorporate phishing simulation testing, dynamic email banners, and further reduce risks and increase your staff's grasp of advanced phishing threats targeting healthcare organizations.

Unlike other static AI solutions, our platform delivers a human-centric approach to keep you in the loop and empowers you to challenge AI outcomes, to help you:

- **Close the skill gap** by launching relevant phishing training and testing to clinicians and administrators based on risk level, department, compliance needs, results of phishing simulation test and more to promote a culture of security awareness

- **Alert employees** of potential threats with dynamic, straightforward email banners

- **Compliance and Insurance Support** through detailed audit trails and incident response logs to help you stay compliant with HIPAA, GDPR, and other regulations
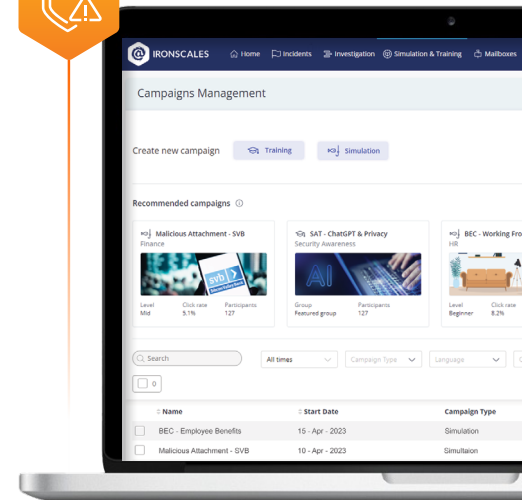

Simplify Operations
Slash time you spend on email security by 90%

Reduce the effort to detect and remediate phishing threats using AI-powered phishing protection that automatically detects and quarantines polymorphic threats.

Unlike traditional and static AI email security solutions, we offer dynamic automation so you can:

- **Automatically group and remediate** email threats across your organization based on similar characteristics in one-click

- **Charter your own email security** strategy with the ability to use Themis as a co-pilot or go fully automated with granular controls

- **Make time-sensitive decisions** and remediate incidents immediately using our mobile app
Quickly see what threats are lurking in your M365 mailbox with our 90-day scan back.

Our free 90-day scan back automatically reviews your Microsoft Office 365 email environment and quickly identifies malware, BEC, phishing, ATO, and other phishing threats that were missed by your SEG.
