IRONSCALES

SAFER TOGETHER

IRONSCALES™ Overview

The Challenge

Phishing is the biggest cyber security problem that your organization faces today, and that's not going to change anytime soon.

Attackers send out billions of new phishing emails every single day. Your security team is overwhelmed trying to keep up.

Legacy email security technologies like Secure Email Gateways (SEGs) were designed for the era of on-prem email environments. They simply can't keep up with the volume and variations of advanced email threats in today's cloud-first world.

We are ready to help!

From our free offerings to our paid plans, IRONSCALES has a solution to meet your needs.

- Get started with our free 90-day scan back to see what phishing threats are getting past your current email security technology.

- Want to see what our solution looks like? Sign up for our free forever offering named IRONSCALES Starter.

- Ready to start using the power of AI/ML, crowdsourced threat intelligence, and automated phishing detection & response? Sign up for a demo of our Email Protect plan today.

- Need to protect more than just your email from phishing attacks? Learn how we can protect your Microsoft Teams environment with a free trial of our Complete Protect plan.

The Solution

IRONSCALES' powerfully simple anti-phishing service is fast to deploy, easy to use, and protects you against today's most dangerous phishing threats.

What makes us different?

- We combine the power of humans + machines in defending against phishing attacks by integrating both phishing protection and security awareness training into a single offering. Powerful AI/ML-driven detection and response, crowdsourced threat intel from across our entire customer base, and dynamic email alert banners all come together in a single powerful solution.

- We deliver email security in the mailbox using anomaly detection, which is the most effective way to stop modern phishing threats like Business Email Compromise (BEC) and Account Takeover (ATO).

- Phishing is no longer confined to just email, so we have expanded our protection capabilities to now include collaboration platforms like Microsoft Teams.
